

WAVE ERP
Integrated Business Management System
developed by **ROPOKAR**

We Grow When You Grow

WAVE ERP is a powerful and feature-rich business management solution suitable for garments, manufacturing, distribution, retail, and e-commerce sectors. Our software is designed to help you achieve optimal business productivity and efficiency with less effort.

WAVE ERP is scalable and can be your organization's core operating system. It is a highly capable ERP system that can increase productivity, profitability, and efficiency. It can support both simple and complex manufacturing, trading, and distribution processes with minimum resources. The system provides full visibility of real-time business data, which empowers management to make timely decisions. It is cloud-based and can be installed on-premises, and can be accessed from anywhere through the web with any standard device.

CRM

A powerful CRM helps you manage opportunities, communicate, and track the status of leads. It will give the organization, control, and visibility over lead sources and their conversion. It can manage communication, projects, proposals, campaigns, quotes, queries, or support issues.

Sales & Account Receivable

Using sale tool users can Open customer accounts, Prepare sales orders, Make sales groups, Prepare Quotations, and Make invoices. Totally integrated with the accounting system no manual intervention is needed. Reports can be made based on projects, customer, period, marketing team/person, outstanding, aging and many more to better understand the heart of the business Sales process.

Purchase & Supply Chain

This module helps to systematically record all the details pertaining to various suppliers, purchase orders, purchase requests, quality checks, purchase returns and much more. It is tightly integrated with the inventory control and production planning modules. Linking accounts and inventory with the purchase process enables a business to optimize its procurement processes and patterns, thereby improve quality and reduce cost/time of procurement and gain a distinct competitive edge.

HR

Our WAVE ERP HRMS is simple and powerful, so you can manage your people efficiently. HRMS covers all the core features of HR management and gives you a simplified view of your workforce, which enables you to get more benefits from your resources easily.

Employee Management

WAVE HRMS supports all basic processes for managing and handling personnel and their information and gives you the ability to manage every employee effortlessly. It can store all the employee details, and their works record so you can monitor their performance by the intelligent performance monitoring system.

Attendance Management

With WAVE ERP HRMS you can track your employees' attendance, working times, and activities. Attendance Management is integrated with all HR process and encourage better employee attendance. WAVE HRMS can replace expensive hardware to reduce the cost of attendance management.

Leave Management

With HRMS, you can track, monitor, record, and evaluate all leaves and absences of your employees. Employees can submit their leave requests to their supervisor using the Self-Service dashboard, and the supervisor can manage Leave requests with clicks. Using Leave Management, the administrator can specify off days for an employee and can see available leave quota for employees.

Payroll Management

Payroll Management helps you to reduce administration, setup costs, and errors while improving reporting, analysis, and responsiveness. With a click of a button, you can run payroll any time during the pay period, and simply change any process if required, and then create and export salary sheet ready for disbursement. Payroll Management can keep all historical records, which means you can see all the payrolls from the past within seconds.

Performance Management

Using Performance Management, the HR manager/supervisor can assign a different project, job, or skill for an employee. The supervisor will do the marking on skills, and within a click, he can see a graphical presentation of employees' performance. This module will also keep historical data of performance for further evaluation, promotion, and training assignments.

Inventory & Stock

Managing inventory is the first step to maximizing revenue for a business. Wave Inventory Management system instantly records any product sale, purchase, reject, or order, and you can see the right record from anywhere on-time. It also includes extensive reporting capabilities, maintenance programs for physical counts and adjustments, and the ability to maintain inventory in multiple distribution centers.

Manufacturing

A great tool to help manage production. Manufacturing tool can Prepare bills of materials, Automatic cost rolls ups, Work center inquiries, Work order entries, and Work order costing. WAVE ERP can be configured to track all the goods and their receipt issues and shipments by the serial numbers. This module can do all individual resource management and process tracking to improve production workflow.

Banking

Managing many bank accounts is a hefty job, and Bank feature makes that easy. Using Bank, you can open Bank accounts, Petty cash accounts, Record payments, Deposits, Withdrawals, Reconciliation, Detect transfers between accounts, Record bank inquiries, and reports.

General Ledger

Complete integrated finance and accounting functions to support all your business needs. You will have access to features such as Fixed assets, Cash flow analysis, Commissions, Budget, Journals, Balance sheet, and Fiscal year closing. General Ledger features also feed into our reporting tool, where you can create insightful reports to reflect data such as sales figures, forecasts, and supplier returns.

Fixed Assets

A separate section in WAVE ERP software is dedicated to the fixed asset. It can track all fixed assets and their value. You can add new assets directly through purchase, sale, dispose, and keep data organized with this module. Changing the value of assets over time will be calculated automatically by different depreciation methods, and accounts will be affected automatically where needed.

Reports

WAVE ERP Software can remove the need for inventory spreadsheets as it can store, organize, and manage all your past and present information, and you can export data in MS Excel or PDF format. It will reduce your cost on paper, and will help the environment by reducing carbon footprint. Report features can generate reports on periodic and hundreds of variable parameters according to your business needs and can make the graphical presentation based on the analysis.

Security

WAVE ERP uses AES encryption when sensitive information is in transition. So any unauthorized access to business data is impossible. Inbuilt visual Role manager dashboard is there for custom permission to data and functions. Users are allowed to see only the selected modules or data by the System Administrator. Many inbuilt functionalities like Purifier and ACL gives protection against XSS, CSRF, and SQL injection to harden existing soft-

Automated

WAVE ERP focuses on cost reduction on the overall ERM process. The system is designed to reduce human intervention as low as possible. Intelligent algorithms will handle ERP Challenges that you can focus on your business.

Flexible

WAVE ERP can run on any operating system (example: Windows, macOS, Linux, etc.), which your company prefers. It also gives you the choice from a wide range of servers including your in house server. Wave ERP is special for its fluid attribute. It can be shaped and redesigned from the ground up to produce perfect integration with the business process with a short time.

Pricing:

The complexity of ERP software increases with the size of the company, departments, and transactions. Paying capability increases when a company has more functions and transactions. Thus, we have priced our software based on the size and type of the company. We have different packages for the company of small, medium, and large sizes. The main feature of our software is its customization capability. Upon customization, the price may vary, and there will be chances for negotiation under special circumstances. To know more about pricing, please visit our website.

Training:

There are few parts of the software like self-services, maintenance, and off the shelf customization. For which it is unnecessary to call Roopokar, rather the software has the inbuilt facility to perform those little tweaks. Small training will suffice to administer and maintain the software at the client end. Roopokar will provide the training for two days at client premises and one week remotely from Roopokar Office.

Deployment:

WAVE ERP deployment can be both on the cloud and on-premises. Google Cloud, AWS, Digital Ocean, and anywhere you name us, we will deploy the software there. And Roopokar will take care of all technical aspects and will provide you the software ready to operate.
